

# ENGINEERING SUCCESS THROUGH INVESTMENT IN EDUCATION

A half-century of Civil Engineering experience has taught us that our strongest competitive advantage is a knowledgeable and skilled workforce with the adeptness to apply technology and solve real-world problems.

That's why Steed and Evans chose to invest in the new Construction Materials Testing Laboratory (CMT) in Conestoga's School of Engineering and Information Technology.

Malcolm Matheson, president says, "We're proud of the contribution – the lab provides an environment where students can learn testing methods and skills that apply directly to specific engineering needs." This substantial donation to support Conestoga's CMT lab will have significant and positive impact on the industry and students alike.

It's our collective responsibility. Students need the opportunity to gain practical work experience while still in school. Conestoga can empower them with the tools, the technology and the education, so that what they do there . . . really does count out here.

Join with us. Together, we can build the pathways to success. Invest in Conestoga, and be the cause of something great.
